

1. Prompt Engineering

- Learn how to talk to AI clearly to get better results.

2. AI Workflow Automation

- Build smart workflows that run tasks automatically.

3. Vibe Coding

- Go from idea to a working website or app with very little code.

4. AI Agent and Assistants

- Create AI that can think, decide, and take action.

5. RAG System

- Make AI answer using your own data

6. AI Data Skills

- Understand, clean, and analyze data for AI models.

7. Compute Vision

- Teach machines to understand images and videos

8. Voice and Speech AI

- Build AI that can talk and listen like humans

9. Search and Optimization with AI

- Use AI to rank content and optimize search

10. AI Ethics and Safety

- Build responsible and safe AI systems
